

## Peripartum management of Type 1 diabetes

Credit is due Dr. Kate Hawke, visiting Aussie Endocrinologist & BCDiabetes Diabetes Technology Fellow 2023-2024, for preparing the handouts below guiding the management of T1D during labour/delivery and immediately after delivery.

Always discuss your peripartum insulin plan with your endocrinologist and obstetrician.

This list is not meant to be exhaustive - for now it covers MDI and the three open-source AID algorithms, Loop, AAPS and iAPS (together “Loop”) that BCDiabetes has focussed on since 2021 - see [this link](#) for our primary Loop publication describing the outcomes in 248 consecutive Loop installations at BCDiabetes.
