## **lispro U200 coverage by BC Pharmacare**

BCDiabetes has many clients with rapid insulin (lispro, aspart & glulisine) total daily dose (TDD) requirement of greater than 150 units. When individual mealtime doses exceed 80 units, the logistics of injection (pen reloading and re-injection), and the subcutaneous volume created, can become problematic.

BCDiabetes hereby requests that BC Pharmacare consider coverage of lispro U200 (branded in BC as Humalog U200) for individuals with TDD of rapid insulin greater than 150 units per day under a Special Authority accessible only to Endocrinologists.
